## Experience

**Ciena** Gurgaon, Haryana  
**Sr. Software Engineer 2B** Aug 2021 - Present

**Undo/Redo with WebSockets:** Engineered efficient undo/redo functionality using WebSocket technology, enhancing user experience and collaboration within the application.

**Streaming for large Grids:** Successfully implemented data streaming to handle large grid data, resulting in improved performance.

**Bulk Edit Component:** I created a Bulk Edit Component specifically for grids. This component dynamically generates forms based on the grid columns using server API data, streamlining the editing process.

**Edit Rights Interface:** Designed a user-friendly interface for requesting edit rights. In cases of API failures due to edit rights restrictions, the system prompts users to request and obtain the necessary permissions. Upon approval, it automatically re-invokes the same API action, streamlining the process.

**Canvas Highlighting:** Created an intuitive canvas highlighting feature that allows users to emphasize specific elements using a variety of color options, enhancing visual clarity and user interaction

**Filter Saving and Interactive UI:** Implemented filter saving for grids and added an interactive UI for effortless grid filter clearing.

**Dew Solution Pvt Ltd** Gurgaon, Haryana  
**Sr. Software Engineer** July 2020 - Aug 2021

Project: **Tata Digital(ReactJS)** - It is a combined Digital platform of Tata Products where people can buy Tata products. Worked on Insurance domain. We have built a responsive app for Mobile and Desktop. Integrated Google Map for auto filling of address.
